- Problem solving, Quick learner, Collaboration

Akash Naskar

PROJECTS

E-SHOP

Online shopping platform

- Built a dynamic and interactive e-commerce app using React JS (frontend) and NodeJS (backend)
- Used Tailwind CSS to add inline stylings
- Responsive design so that one can access this app from any device
- User can sign up, login, can add products to the dB, explore products, add product to cart and place order
- GitHub Link: <https://github.com/naskar-akash/E-Shop.git>
- Deployed version: <https://e-shop-fmhh.vercel.app/>

BOT

Automatic WhatsApp message reply application

- Python-based automatic bot that opens WhatsApp, reads the WhatsApp messages from screen of the person with whom you are chatting and sends AI generated natural responses.
- GitHub Link: <https://github.com/naskar-akash/BOT.git>

JARVIS

Voice assistance with AI powers to perform your works

- Built an offline voice assistant using Python, powered by Vosk (speech recognition) and Windows Text-to-Speech.
- Jarvis listens for a wake word, processes voice commands, and performs actions like opening websites or playing music
- GitHub Link: <https://github.com/naskar-akash/Jarvis.git>

E-WALLET APP

To store students' details

- Built for tutors who want to store students' details
- Responsive design so that operated from phone
- Live preview: <https://e-wallet-app-ky36.onrender.com/>
- Users' details will be stored in MongoDB atlas
- GitHub Link: <https://github.com/naskar-akash/E-Wallet.git>
